

Homework 3

(15 points)

Recursive-descent parsing

Study the Mini-Pascal BNF grammar attached to this exercise sheet and do the following tasks:

1. Transform the grammar into a form suitable for a recursive-descent parsing as follows:
 - a. Eliminate the left recursion; **(1 point)**
 - b. Left factorize the productions (replace non-terminals with their right hand side, if necessary); **(1 point)**
 - c. Convert the grammar into the EBNF form; **(1 point)**
2. Declare the set of tokens in an enumerated type and modify the lexical analyser from Homework 1 to return the correct token when matching a regular expression; **(1 point)**
3. Write a recursive-descent parser that uses the lexical analyser implemented in the previous task to get the next lookahead token; **(10 points)**
4. Modify your Mini-Pascal test program to contain at least five syntactic errors; **(0.5 points)**
5. Stop the parse at the first syntactic error with a meaningful error message including the line number. **(0.5 points)**
